

The **Auroville Institute of Applied Technology** is a non-profit educational institution under the Auroville Foundation, affiliated with Pondicherry University. AIAT is committed to providing higher-education with industry-oriented skills and integral personality development (humanity intelligence, self-awareness and responsibility). Our initiatives align closely with Auroville's values of human unity and sustainable development.

AIAT currently offers four Bachelor of Vocation (B.Voc) degree programs, each of three years duration, designed to integrate academic learning with hands-on, practical training:

1. Software Development & Machine Learning
2. Applied Electronics & Chip Design
3. Green Energy & Electrical Systems
4. Production Technology

At AIAT, the Radical Transformational Leadership (RTL) program is integrated into the curriculum across all semesters through the "Integral Yoga and Value-Embodied Leadership" courses. In addition to the academic coursework, students actively participate in RTL programs conducted annually, with one program offered in Tamil and another in English. These programs provide learning opportunities that help students apply their values and encourage them to apply the concepts learned through RTL in their daily lives as well as in their academic and project work, for personal and professional development. The students also take up projects that are relevant to the Auroville community with their teachers.
